Applications of Genetic Engineering Genetic engineering has wide, applications in modern biotechnology. Since microbial cells have a much higher metabolic rate, genes of desired enzymes could be introduced into plasmid of bacteria. The bacterial insulin, humulin was prepared by cloning the DNA from chromosome number 11 of human cells in bacteria.

4. Recombinant DNA, with the plasmid containing the added DNA or gene has been formed. 5. The recombinant plasmids are added to a culture of bacterial cells. Under the right conditions, some of the bacteria will take in the plasmid from the solution during a process known as transformation. 6.

CHAPTER 14 LECTURE NOTES : RECOMBINANT DNA TECHNOLOGY A

This book examines the history of biotechnology when it was new, especially when it was synonymous with recombinant DNA technology. I focus on the academic community in the San Francisco Bay Area where recombinant DNA technology was developed and adopted as the first major commercial technology for genetic engineering at Stanford in the 1970s.
