Ideal Gas Law and Kinetic Theory of Gases Chapter 20 Entropy and the Second Law of Thermodynamics Now we to look at temperature, pressure, and internal energy in terms of the motion of molecules and atoms? Relate to the 1st Law of Thermodynamics $\hat{\infty}$ Thermal expansion cracking the nut. (Strength of electrical forces)

dis of the order of angstroms. Therefore, if the average kinetic energy of the molecules is much larger than the characteristic energy, and the average spacing between molecules (that is the cube root of V/n) is much larger than the characteristic distance, d , then we may apply kinetic theory.

AP Physics: Thermodynamics, Kinetic Theory, Heat Zeroth Law states that if object A is in thermal equilibrium with object B, and object B is in thermal equilibrium with object C, then object C is also in thermal equilibrium with object A. This law allows us to build thermometers.

KINETIC THEORY OF GASES AND THERMODYNAMICS SECTION I Kinetic theory of gases Some important terms in kinetic theory of gases Macroscopic quantities: Physical quantities like pressure, temperature, volume, internal energy are associated with gases. These quantities are obtained as an average combined effect of the process taking

of the atomic and molecular basis of thermodynamics by developing the kinetic theory of gases a simplified

model of gas behavior based on the laws of classical mechanics. We start with a discussion of how the ideal gas law characterizes the macroscopic behavior of simple gases. This macroscopic law relates the amount of gas and its
